Q10: (+6 points): Normerically approximate I= (24/x-1/dx with N=6 rectangles. Find the lower sum estimate(L) $\Delta x = \frac{2-(-1)}{6} = \frac{1}{2}$ X0=-1, X1=-1/2, X2=0, X3=1/2,

X4=1,X5=3/2,X6=2

· for X & [-1, 1], the rectangle heights are the function values at The RHS endpornts, and for x e [1,2] at the LHS endpoints. · So for f(x)= |x-11, L= 240x (f(1/2)+f(0)+f(1/2) +f(1)+f(1)+f(3/2)) = 12·(多+1+ 1+ 1+ 0+0+ 1) = 12.7=6.7 = 42

Similarly, to find U:

$$V = 24\Delta \times (2+\frac{3}{2}+1+\frac{1}{2}+\frac{1}{2$$
